

Office of the Chief Information Officer: Vendor Meeting – September 6, 2006

Presented by:
Daniel Mintz
DOT CIO

Welcome

- Thank-You for coming and participating
- Our goal is to make this of value
- We encourage feedback so we can improve

My Goals for the OCIO

- First, cause no harm: support continuing creation and enhancement to the Common Operating Environment and IT Infrastructure, move to the New Building
- Improve IT governance: move from Business Silo's to increasing Standard Technology, big cultural change
- Support Operating Administrations in identifying areas of duplication and inefficiency
 - Select Common Data & Application Services which are candidates to be moved to either the Business or IT Infrastructure layers
 - Use Enterprise Architecture and Capital Investment process to support these goals
- Enhance security posture
- Support Department strategic initiatives

Who Am I Interested In Meeting

- Someone one of my direct reports tells me to meet
 - Most likely will be someone who can discuss how to support/improve/optimize a goal of part of my staff and/or experience in supporting what they support
 - Rarely will be interested in having a technology discussion unless I can be convinced (by my staff) that the offering is truly transformational – this will be very (very) hard to do
 - Also interested in talking to corporate CIO's who have a situation similar to mine – with corporate-wide responsibilities and who have had to deal with distributed decision making and revising Governance structures
